

Features & Benefits

The Layer2 Cloud Connector connects your line-of-business data to Microsoft SharePoint, Office 365, Dynamics CRM/ERP, Exchange, SQL databases and almost any other systems:

- No programming or tools required: Just select a data provider, enter connection string and data query. No installation or customizing at SharePoint or the external data source required.
- 100% compatible to ALL SharePoint 2010 / 2013 / 2016 offerings: On premise, externally hosted, Office 365, OneDrive for Business, or sandboxed.
- Reliable architecture: A connection is established only for data exchange – not for user interaction. External data is cached in native SharePoint lists.
- Secure data connection and transfer: The connector runs where your data resides today - on any server or client inside your corporate network with Internet connectivity available, or in the cloud. No data is exposed to any 3rd party.
- Dynamic Columns: Optionally add calculations, transformations, translations, and business logic to your connections using C#.
- Almost any data source supported: ODBC, OLEDB, OData, .NET-based providers, file content (Excel, XML, CSV), File System Replication, SQL Server, Oracle, MySQL, IBM DB2, IBM AS/400, IBM Informix, PostgreSQL, Microsoft SharePoint, Dynamics NAV/CRM, Exchange, Active Directory, Navision, Lotus Notes, SAP, Web Services etc.
- Data providers for SharePoint, OData, File System, XML/RSS, Exchange, SOAP included. Vendor specific or 3rd party ADO.NET data providers supported.
- Start workflows or send email notifications in the cloud on external data change.
- Sync your local or server file shares to SharePoint, Office 365, OneDrive4B without any restrictions.
- Connect all supported systems directly with each other, without using SharePoint or Office 365.

“I am thoroughly impressed with your Cloud Connector software. It is an excellent concept, has extremely comprehensive functionality and is easy to configure.”

Brent Seeney, Information Systems Support Manager at INEX Independent Extrusions Limited

Licensing & Partner Program

Licensing per installation. No user CALs required.
